

PACKAGING PROCESS

OF ZERN ENGINEERING
HEAT EXCHANGERS

POLYSTYRENE

**1****Formation of layers on a pallet.**

A set of heat exchangers is made to form layers. Layers are separated with cardboard.

**2****Initial fixation.**

Initial fixation of the assembled pallet of heat exchangers is carried out using a strapping tape.

**3****Fixation of the assembled pallet.**

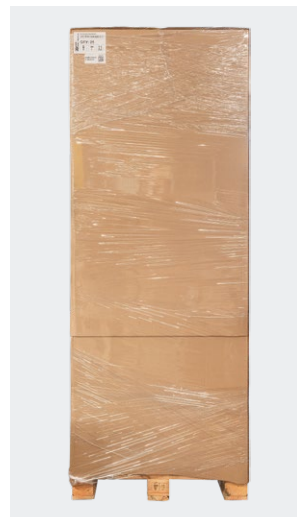

The entire pallet is wrapped around the perimeter with a stretch film.

**4****Covering the pallet with a box.**

Cover the finished pallet with a cardboard box.

**5****Fixing the box.**

Fix the box with a stretch film and pull together with a strapping tape.

**6****Marking and final appearance.**

After the end of the packing procedure, the pallet is marked with an appropriate sticker and sent to a storage or transit point.

In this form the pallet is delivered to the end user.
